2020 Funding Opportunities for Cancer Prevention or Early Detection Research

Two-Year $100,000 Grants or Fellowships

Application Period
Opens: Monday, May 18, 2020
Closes: Wednesday, June 24, 2020
Application Fee: $80.00

For over 30 years, the Prevent Cancer Foundation has been funding grants and fellowships that demonstrate potential for impact on cancer prevention or early detection. The goal of the Foundation’s Research Program is to provide funding for innovative projects expected to lead to future funding from other peer-reviewed sources.

- We welcome original proposals that clearly describe pre-clinical, translational, clinical or population-based research projects in the field of cancer prevention or early detection.
- Researchers with relevant academic or professional degrees (e.g., MD, PharmD, PhD) who are conducting cancer prevention/early detection research are eligible to apply.
- Researchers need not be United States citizens. However, research must be conducted primarily in the U.S.
- Funds will not be awarded to individuals (principal investigators or fellows) who accept direct funding from the tobacco or vaping industries.
- Studies related to therapy for established or advanced cancer will not be reviewed.

For complete proposal information including eligibility information, guidelines and FAQs, visit http://preventcancer.org/our-work/grants-fellowships/research/research-applications/.
